

## PM Polarization Maintaining Assemblies

Optotec offers a wide range of PC and APC connectors for PM fibres and customized termination services tailored to the most challenging optical performance requests. Both passive (ER>17 dB) and active alignment process (>24 dB) are available to meet customer performances and price needs.

Please note that Optotec standard PM alignment is performed to the slow axis. For assemblies on PM optical devices, please provide copies of the technical datasheet and any other relevant documents.

Optotec provides very high performance PM terminations directly to any optical devices (polarization based modulators and pigtailed lasers, mechanical and thermal sensors, optical interferometry, medical devices) as well as to pigtailed and patch cords assemblies.
